

# Bitcoin and Blockchains: A Closer Look

Friday, March 23, 2018, 8–9pm

Room 130, Olin Life Sciences Building, FIT

More info: <http://www.cs.fit.edu/~pkc/dept/bitcoin/>

Speakers from the School of Computing at Florida Tech will discuss the impact that computational advances have on society. Now new kinds of currencies are being introduced — even the notion of money is being challenged. Bitcoin is a digital cryptocurrency that can be used in online payments. It and other cryptocurrencies rely on blockchains to prevent double-spending and preserve anonymity. Blockchains are managed by a network of computers without governmental or centralized authority.

P.S. In the same evening a telescope viewing is set for 9pm (more details are at <http://cos.fit.edu/pss/aapls.php>).

Free and open to the public

Sponsored by the School of Computing
